

Basic Project Information

Title: Psychological Research

Beginning & End Date: 9/6/10-6/17/11

Number of Classrooms: Unlimited

Age Range: 15-18

Grade Range: 9-12

Target Audience: High school students

Summary: How is psychological research helpful? This project would consist of high school students participating in Psychology research. Students would be able to come up with research ideas and test them by surveying students worldwide. They would then interpret their findings and share them with each other. Students must be able to communicate online using various types of programs. The information would be used solely for individual benefit. The results, in no way, are 100% accurate.

Project Details

Project Level: Medium Level

Curriculum Fit: Psychology, Stats

Technology Used: Internet; Communication: Email, Messaging, IM; Text: Descriptions, Analysis

Collaboration Style Used: Information Exchange

Full Project Description: For this project students would come up with a possible research idea that is relevant to psychology or a related subject of interest. They would come up with a study, consisting of research questions that can all be completed online. They could be in survey form, where they rate things, or even short answer form. All high school students worldwide would be able to provide feedback for any study they wish to participate in. The student that submitted the idea would then interpret their findings and submit the results. This allows students to have a greater appreciation for the testing that is done for psychology. They can challenge their minds by posing questions of interest and finding results on their own.

Registration Information

Registration Dates: March 2010-August 2010

Registration Instructions: If interested please submit your name, school, and e-mail.

Contact Information: cjc02704@sjfc.edu
